

# Corona-Plus

## ADVANTAGES

### Heavy duty construction, and quick and easy maintenance

The Vetaphone corona stations are designed for optimum productivity, ensuring high profitability for both film-manufacturers and converters.

The new robust construction ensures perfect alignment for roll and electrode system, and the housing ensures no ozone leakage. All parts are made from corrosion and ozone-proof materials.

Not only are the stations made stronger, they have also become more functional through a smarter design. This makes them easier to operate and maintain.

**Rotation control** combined with earthing brushes ensures precise rotation control and automatic power adjustment according to speed.

**Backing roller** is static and dynamic balanced bare roll, silicone roll or ceramic covered roll with the option of air or water cooling easily changeable, even when extended shaft or motor is required.

**Changeable electrodes** can be removed for maintenance without special tools. Replacement of the teflon insulators only need an Allen key.

**Ball bearings** external mounted ball bearings can easily be maintained without dismantling the roller.
